ONERENT · QUICK USER GUIDE

Steam cleaner Kärcher SG 4/4

A short guide to the steam cleaner: filling, heating up, working with the tools and safe use.

1. Before you start

- Check that the kit contains everything listed in the hand-over record.
- Fill the water tank with clean tap water (for very hard water the manufacturer recommends mixing in distilled water).
- Connect the steam hose and the tool you need — floor, tile or joint tool.

2. Working

- Plug into a 230 V socket and switch on. Wait until the indicator shows steam is ready (about 9 minutes).
- Adjust the steam amount and clean by moving the tool slowly; wipe away grease and limescale with a cloth right after steaming.
- Water can be topped up during work — the tank is not under pressure.

3. Tips

- Test the surface on a hidden spot first — steam does not suit every material (e.g. untreated wood).
- For floors, use a cloth on the floor tool and change it when it gets dirty.

4. Safety and care

- Steam is very hot — never point it at people, animals or electrical devices.
- Change tools only with the steam stopped; do not touch hot metal parts.
- After work, switch off, unplug and let it cool down.
- If the equipment does not work properly, stop using it and call us: +371 26537465.

5. Returning

- Return the equipment to Slokas iela 52N clean and complete — with all accessories listed in the hand-over record.
- Return the cleaner cooled down; put dirty cloths in a separate bag.
